### Reflection (14 pts)

(3 pts) Discuss 3 to 5 user interface bugs you found in your heuristic evaluation. Be sure to include your design for fixing those bugs, annotated screenshots are ok.

I ran a quick heuristic evaluation with a student based on a simple task: order a box of 6 buns and I found 3 errors:

1. Consistency & Standards: Popular  
Shop and front page language for popular items needed to be more clear so I changed the text.
2. Consistency & Standards: sets  
Shop Language needed to be more clear for boxes needed to be more clear so I changed the text.
3. Visibility of system status: menu page  
Mini-navigation bar needed to tell the user what to expect on the somewhat long page because the user was shocked at what was on the shop page.

(3 pts) What challenges or bugs did you encounter in the process of implementation, and how did you overcome the challenges?

I found that going through codecademy/lab and actually implementing the code from scratch is very different. I was googling a lot of specific things (like how to use grid-area-template or how to create a navigation bar) and watching youtube tutorials to try to understand the implementation/functions better.

I also encountered a lot of bugs like not understanding why certain variable names won't be called and grid issues. It was a lot of playing with the code back and forth (typing in something and reloading the file in the web browser) and trying to apply what I learned in codecademy/google searches to find an optimal way to implement the structure of the code.

(3 pts) How is the brand identity of your client reflected through your design choices? What kind of look and feel did you design for them and why?

The client is Bun Bun Bake Shop. When I think of a bakery, I associate a lot of warm orange colors with it. I chose a complementary color, light blue, and minimalistic graphics paired with really warm but busy photographs to contrast with those visuals and complement the store's visuals. The site was designed with really minimal graphics for ease of use.
